---

Dear InfoMart Recruitment Team,

I am interested in applying for the java developer position. As a graduate in Game Design from the Rochester Institute of Technology, I am looking for a job where I can utilize my experience in programming/design in a professional environment. I have experience with multiple computing languages, including Java, C++, C# and JavaScript. Additionally, I have previous programming work experience.

In the Rochester Institute of Technology game design program, I have completed numerous team-based projects requiring my leadership and strong verbal and written communication skills. I have excellent technical and analytical abilities which have been invaluable when undertaking team-based programming projects. Through my multiple experiences making games with a strict deadline, I have learned to quickly coordinate and efficiently plan for hitting team milestones. I prioritize minimalism and readability when I design my code. I work on organizing my code, so my team members thoroughly understand my programming.

I am passionate about learning and mastering new ideas and concepts. On my own spare time I taught myself how to work with an Android Studio SDK, leading me to develop my own Android game app. My game is now currently under submission in the Android play store and will soon be available to the public. This is one of many projects where my determination to learn new concepts and ideas resulted in the successful creation of a product, in this case a mobile app. I am confident that I can quickly and effectively learn any tools or programs that are unfamiliar to most entry-level applicants.

I would be a terrific choice for this programming position. I am detail oriented and can visualize how code will translate into a finished application. I am confident that my experience with programming in teams and my desire to master new concepts make me a perfect applicant for this position. I am passionate about programming and I am determined to create quality content for others to enjoy. I look forward to discussing this position and my qualifications in a further interview.

Sincerely,

Matthew Oelbaum
